

Austin Hardaway

Lead Software Engineer · github.com/austinhardaway · austinhardaway@gmail.com · linkedin.com/in/austinhardaway

Frontend-focused engineer with 8 years of professional experience building and leading development of large-scale web applications. Comfortable across the full stack, with deep expertise in React, TypeScript, and modern toolchains. Proven track record of turning legacy codebases into performant, well-tested products — and shipping them on a cadence that matters.

TECHNICAL SKILLS

Frontend: React, TypeScript, JavaScript, HTML/CSS, Tailwind CSS, shadcn/ui, TanStack Router & Table, Next.js

Tooling: Vite, Webpack, Zod, Axios, Redux, ESLint, Prettier, Storybook, Jest, Vitest, Playwright

Backend & Infra: Node.js, Express, .NET Core, SQL, Azure (AKS, ACR, DevOps), Docker, Kubernetes, GitHub Actions

Practices: AI-first development, CI/CD, WCAG accessibility, Figma handoff, code review, mentorship

EXPERIENCE

Lead Software Engineer · AT&T

2024 – Present | Plano, TX

- Own the frontend architecture and final code review across three large-scale internal applications serving roughly 100,000 employees.
- Rewrote a legacy Angular 1 URL shortener as a modern TypeScript/React app on Vite with shadcn/ui, TanStack, and Zod — a complete link management and analytics platform. Post-launch user task completion rate tripled; QA-reported issues dropped 30%.
- Drove test coverage on a complex React mail platform from near zero to 92%; migrated from quarterly releases to two-week sprints.
- Built an AI-powered deploy plan workflow integrating Jira MCP, Claude, and the Confluence API — cutting a multi-day manual process to minutes. Won an internal AI hackathon award and became an official recommended workflow for the organization.
- Migrated CI/CD from on-prem Ansible scripts to Dockerized containers on Azure AKS, then to GitHub Actions pipelines.
- Mentors three junior engineers through structured 1:1s and deep pairing sessions; leads PI planning for the team.

Senior Software Engineer · AT&T

2023 – 2024 | Plano, TX

- Greenfield development of a WYSIWYG internal mail platform built to win a competitive bake-off against SaaS alternatives — delivered on deadline and adopted org-wide.
- Architected a comprehensive feature-flag strategy enabling zero-downtime migration of legacy dashboard users onto the new platform.

Software Engineer II · AT&T

2021 – 2023 | Dallas, TX

- Built data visualization tooling for a warehouse with hundreds of millions of records; tuned SQL indexes and automated caching to hit interactive response targets.

TDP Engineer II – Rapid Prototyping · AT&T

2019 – 2021 | Dallas, TX

- Member of an internal prototyping team delivering 0-to-MVP applications in ~3-month sprints across React, Vue, Svelte, Go, and Node.js — handing off working products and training long-term teams.
- Shipped diverse MVPs: a customer escalation tool, an AR product viewer, a mobile coupon platform, and an internal Kubernetes management UI.

DevOps Intern · Macy's

Summer 2018 | Johns Creek, GA

- Contributed backend API work on an internal platform that dynamically provisioned app deployments across AWS and GCE based on real-time compute pricing.

EDUCATION

B.S. Computer Science & B.S. Mathematics · University of Georgia

Class of 2019

Teaching Assistant, Intro to Programming (2017–2019) — built an automated grading system still in use at the university.
